

Dr. Raj Shah inducted as a Fellow into the Institute of Measurement and Control, UK

NLGI Fellow and ex- board member Dr. Raj Shah has been inducted as a Fellow of the Institute of Measurement and Control. He is the first ever NLGI or STLE member to achieve this honor.

The Institute of Measurement and Control is recognized by the Royal Charter as the professional body for scientists and engineers working in measurement, automation and control. Founded in 1944, its members' original priority was to maintain the national infrastructure and support wartime logistics. During the post-war reconstruction years, attention shifted to developing new major infrastructure programs including nuclear power, oil and gas, the transport network and major industrial and chemical facilities. Dr. Shah was inducted into its hall of Fellows recently and it is indeed a rare honor for an American engineer.

Currently the members of INSTMC are still involved in all the above areas, but the digital age has opened a new sphere of involvement in the area of sensors linked to intelligence. This includes the Internet of Things, cyber security, smart cities and transport networks, driverless cars, personal health monitoring and astronomical exploration. It is indeed a unique and singular honor for Dr. Shah to be honored by his peers as a fellow of this prestigious institute.

Currently a Director at Koehler Instrument Company in Holtsville NY, Dr. Shah's other interests include kayaking, reading and mobile photography. He lives in Melville, NY with his wife of 23 years Dr. Niloufar Faridi and their son Kian. They are active in the special needs and paddling communities and enjoy participating and organizing various philanthropic events for kids with special needs.
