JOB SUMMARY:

This position involves carrying out Research and Development projects to develop new technology, products and manufacturing processes. Responsible for all aspects of the project from start to finish including document production, testing, analysis of pilot plant batches, production scaleup, and communication with development initiators. Additional responsibilities include technical services, such as, product recommendations and assistance in customer complaint resolution.

ESSENTIAL FUNCTIONS:

- Manufactures and tests small & medium scale pilot plant batches of new products against given specifications reporting results to Vice President, Technology.
- Operation of all Pilot Plant equipment.
- Performs instrument calibration on-site, as needed.
- Maintains test data records of pilot plant batches and competitive products.
- Produces evidence of performance meeting customer and industry standards.
- Assists in manufacturing and quality control in new product development process.
- Input formulation, process, quality control specifications, and certificate of analysis requirements into computer system.
- Perform tests that ensure that products continue to meet customer requirements and develop evidence of performance.
- Reports detailed experimental results, comparison to current and competitive products and manufacturing procedures.
- Provides training in test methods and pilot plant operation.
- Evaluate raw material performance and net treat costs.
- Maintains R&D labs, including raw material inventory and housekeeping.
- Provides support to all local and remote team members.
- Assists in the completion of special technology projects as required and any other duties as assigned by management.

EDUCATION & EXPERIENCE:

- Bachelor of Science degree required, major in Chemistry preferred.
- Minimum of 1-year experience in a Petroleum Products Laboratory or other production laboratory setting, or equivalent.
- Working knowledge of grease additives is a plus.
